LSVT LOUD™ FACT SHEET

FIRST SPEECH TREATMENT WITH LEVEL 1 EVIDENCE AND ESTABLISHED EFFICACY FOR TREATING VOICE AND SPEECH DISORDERS IN INDIVIDUALS WITH PARKINSON DISEASE WITH APPLICATION TO OTHER NEUROLOGICAL DISORDERS.

- The LSVT LOUD improves both the voice and speech of individuals with Parkinson disease by treating the underlying physical pathology associated with disordered voice.

- Treatment focuses on improving vocal loudness and immediate carryover into daily communication enabling patients to maintain and/or improve their oral communication.

- The LSVT LOUD is administered on an intensive schedule of 16 individual, 60-minutes sessions in one month’s time.

- 90% of patients improve vocal loudness from pre to post-treatment.

- Approximately 80% of patients maintain treatment improvements in their voice for 12-24 months post-treatment.

- ALL patients report improvement in their ability to communicate.

- LSVT LOUD is being successfully delivered by over 6,000 certified LSVT LOUD clinicians in 50 countries.

Research has been funded by the following organizations: National Institutes of Health-National Institutes on Deafness and Other Communication Disorders (NID-NIDCD) Grants #P60 DC00976 and #R01 DC001150; and The Office of Education-National Institute for Disability and Rehabilitative Research (OE-NIDRR) Grants #H133G0079 and #H133G40108.
